

KPI'S WITH PROPER QUERIES

Total Revenue: select sum(total_price) AS total_revenue from pzsld

A screenshot of a SQL query results window. At the top, there is a zoom dropdown set to '.00 %' and a scroll bar. Below are two tabs: 'Results' (active) and 'Messages'. The results table has one column 'total_revenue' and one row with the value '817860.05083847'.

	total_revenue
1	817860.05083847

Average Order Value :select sum(total_price)/COUNT(distinct order_id) AS Average_order_value from pzsld

A screenshot of a SQL query results window. At the top, there is a zoom dropdown set to '100 %' and a scroll bar. Below are two tabs: 'Results' (active) and 'Messages'. The results table has one column 'Average_order_value' and one row with the value '38.3072623343546'.

	Average_order_value
1	38.3072623343546

Total Pizza Sold=select sum(quantity) AS total_pizza_sold from pzsld

A screenshot of a SQL query results window. At the top, there is a zoom dropdown set to '100 %' and a scroll bar. Below are two tabs: 'Results' (active) and 'Messages'. The results table has one column 'total_pizza_sold' and one row with the value '49574'.

	total_pizza_sold
1	49574

Total Orders: select count (distinct order_id) AS total_orders from pzsld

A screenshot of a SQL query results window. At the top, there is a zoom dropdown set to '100 %' and a scroll bar. Below are two tabs: 'Results' (active) and 'Messages'. The results table has one column 'total_orders' and one row with the value '21350'.

	total_orders
1	21350

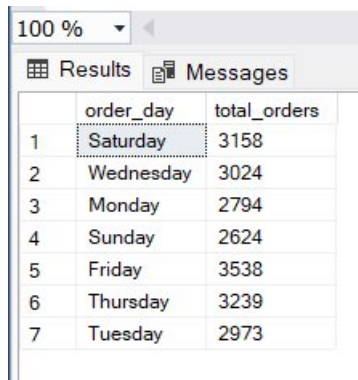

Average Pizza Per Order: select cast(cast(sum(quantity) AS decimal (10,2))/cast(count(distinct order_id) AS decimal (10,2)) AS decimal(10,2)) AS Average_pizza_per_order
from pzsld

A screenshot of a SQL query results window. At the top, there is a zoom dropdown set to '100 %' and a scroll bar. Below are two tabs: 'Results' (active) and 'Messages'. The results table has one column 'Average_pizza_per_order' and one row with the value '2.32'.

	Average_pizza_per_order
1	2.32
